End Product Data Schedule (EPDS)

EPDS 1

INSTRUCTIONS AND EXPLANATIONS
USDA FOODS 100% YIELD AND GUARANTEED RETURN

This form can be used for both substitutable and non-substitutable USDA food end products. All end products to be processed must be submitted on an End Product Data Schedule (EPDS) and approved by the applicable government agency. Summary Data from the approved EPDS will be generated and updated by the approving government agency. If two forms of the same USDA food, such as coarse ground beef and fine ground beef, are to be processed, submit a separate EPDS for each USDA food when the percent guaranteed return is different. For all calculations, use normal round-off procedures to two (2) decimal places.

Column 1 List finished end product code and product name as it appears on label.

Column 2 Net weight in pounds of one case of finished product as shown on the label.

Column 3 Indicate the number of servings per case.

Column 4 Indicate the net weight of ***each*** ingredient listed and total serving weight in ounces at the bottom of the column .

Column 5 Use material code and short title for each USDA food used as an ingredient. Using one line per ingredient, name each ingredient contained in raw batch including non-material ingredients. Spices and seasonings may be aggregate.

Column 6 Across from each ingredient indicate the quantity in pounds of that ingredient which goes into the raw batch formula. Enter total batch weight. It is recommended that actual batch weight be used where possible, but a hypothetical batch weight (i.e. 100 lbs) can be used if the proportion of ingredients remains the same regardless of batch size.

Column 6a If applicable, indicate the percent of breading for each product listed. Subtract the un-breaded weight from the breaded weight (prior to frying), divide this figure by breaded weights, and multiply by 100 to determine the percent of breading.

Column 6 A For other ingredients, acceptable documentation must be submitted to FNS FDD to substantiate. For cheese subtitution reference Cheese Substitution Instructions below

.75 for Gruyere, Parmesan, Romano, and Skim cheeses

1.00 for Monterey Jack, flavored or low-fat varieties

1.25 for Asiago, Blue, Gorgonzola, and Roquefort

1.5 for Brie and Camembert

1.75 for Feta and Ricotta

Note: Column 7 through Box 11 are completed for the USDA food only

Column 7 The number of cases of finished product produced per the size batch given in Column 6. This figure should represent average batch production for substitutable USDA food verified by production records.

Column 8 The amount of raw USDA food required to produce one case of finished product is calculated by dividing the weight of USDA food (Column 6) by the number of cases of end product (Column 7). NOTE: For Meat & Poultry, Column 8 will be the drawdown on USDA Foods inventory. Column 10 will be the drawdown for all other USDA Foods.

Column 9 This is the average percentage of manufacturing yield for all processing of each finished product. For cooked product, this also represents the cooking loss of the USDA food.

Column 10 This is the amount of USDA food contained per case of finished product. This is calculated by multiplying Column 8 x Column 9. This column shall be used for inventory reduction of substitutable USDA food and is the basis for calculating discount or refund for substitutable USDA food on the Summary End Product Data Schedule. For all calculations, use normal round-off procedures to two (2) decimal places.

Box 11 Percent guaranteed return (GR) is calculated by dividing Column 2 by Column 8. It applies only to meat and poultry processing.

Box 12: Processor: List company name, authroized person, title, signature and date. Signature image files or Verified E-signatures may be used.

Box 13 Subcontractor: (if applicable) List company name, authroized person, title, signature and date. Signature image files or Verified E-signatures may be used.

Box 14 Approving Agency: Do not complete. For Federal or State Ageny use only.

Submit EPDS to: NPA@USDA.GOV
